

Stratus Infra

Optimal financial planning
for your infrastructure

Strategic infrastructure maintenance

Stratus provides the evidence for sound decision-making

Local authorities need to maintain a great number of structures, such as roads, utility lines and buildings. Securing the long-term attractiveness of your location requires targeted infrastructure maintenance and financial planning. With Stratus Infra, all measures can be planned well in advanced.

The right investments

Today, municipalities face each other in tough competition: favourable tax multiplier and attractive rates are important location factors. Likewise, municipal infrastructures play a significant role in providing a high quality of life. In order to sustain this quality in the long run, resources need to be used highly targeted and economically. This makes it all the more important to have a reliable evidence base: what is the current state of your infrastructure? What maintenance and repair work will be necessary in the future? What are the expected costs? In addition, the impact of cost-saving measures or additional investments should be easy to identify and present in a simple and understandable way. Having this information is the prerequisite for well-grounded decision-making.

Evidence-based decisions thanks to Stratus Infra

Stratus Infra provides the necessary overview for your infrastructure portfolio. In order to be comparable, all structures are evaluated with the same method. For documenting its present state, you can utilise existing instruments or opt for the proven Stratus method. The software determines the key parameters for managing your infrastructure:

- new build and current state value
- maintenance costs (operational maintenance and repair)
- repair costs (structural maintenance and refurbishment)
- preliminary schedule of future repairs
- presentation of investment scenarios

The results and scenarios are communicated through tables and graphics, and can be further processed in a spreadsheet program or database. The operational figures can be calculated as needed for specific questions or subareas, or totalled for the entire portfolio.

Stratus Infra at a glance

Stratus Infra software

- _ All relevant parameters for maintenance planning
- _ Overview of the current state of the infrastructure and required financing
- _ Investment scenarios
- _ Clear presentation of data and results in tables and graphics
- _ Uniform terminology and scales for all types of structures

Stratus Infra services

- _ Data collection or integration of existing data
- _ Electronic processing and data maintenance
- _ Special evaluations by experts
- _ Strategic consulting

Operation of Stratus Infra

- _ Web application or installed software
- _ Training
- _ Integration of existing instruments
- _ Maintenance
